Description & Details

Location:
New York, New York

Industry:
Finance/Banking - Other

Job Function:
Computer Drafting and Design, IT/Systems, Programming/Software Development, Web Design, Web Development

Description:

If you are a recent computer science or electrical engineering college grad interested in working in mid-town Manhattan for one of Wall Street's fastest growing financial services software companies, then read on. The company is focused on the world of securities sales and trading with an innovative suite of offerings that are being increasingly adopted by Wall Street firms. If you want an exciting, high-paced, client focused career instead of being stuck coding all day, then this may be for you.

This is not your typical entry-level position, in either the financial or software worlds. Perched between the firm's technology and business groups, this Engineering position will play a critical role in "on-boarding" new customers to our hosted service and supporting existing customers in both their functional and technical requirements. This is the perfect role for a high-achieving Computer Science or related major looking to leverage his/her academic training into a unique career at the cutting edge of financial services. This entry-level role is intended for a bright, recent college graduate with the creativity, ambition, and entrepreneurial drive to grow in step with a small company pursuing big plans and cutting-edge ideas. This position includes full benefits and the potential for equity, along with a starting annual salary commensurate with experience.

Requirements:

- Feel at home on a unix command line and be familiar with common utilities such as vi, ssh, grep, tail, etc.
- Understand SQL and relational database concepts.

- Program declaratively in Python using modern language features such as generators, list comprehensions, etc.
- Understand security best practices
- Understand networking technologies such as DNS, HTTP, and SSL.

We would also be impressed if you have experience with or an interest in some of the following technologies. Please only list these on your resume if you thoroughly understand the concepts involved.

- A modern MVC web development framework such as Django or Rails
- JavaScript, HTML, and CSS
- Java and/or C#
- Oracle PL-SQL
- Bash, Perl, or another scripting language

If you are interested in this position, please send a plain text or PDF resume to the address below. Include a cover letter that describes, in detail, your technical background and your future career aspirations. Applications without a cover letter addressing these topics will be discarded.
